Our Pledge

In the interest of fostering an open and welcoming environment, we as contributors and maintainers pledge to make participation in our project and our community a harassment-free experience for everyone, regardless of age, body size, disability, ethnicity, sex characteristics, gender identity and expression, level of experience, education, socio-economic status, nationality, personal appearance, race, religion, or sexual identity and orientation.

Our Standards

Examples of behavior that contributes to creating a positive environment include:

- Using welcoming and inclusive language
- Being respectful of differing viewpoints and experiences
- Gracefully accepting constructive criticism
- Focusing on what is best for the community
- Showing empathy towards other community members

Examples of unacceptable behavior by participants include:

- The use of sexualized language or imagery and unwelcome sexual attention or advances
- Trolling, insulting/derogatory comments, and personal or political attacks
- Public or private harassment
- Publishing others' private information, such as a physical or electronic address, without explicit permission
- Other conduct which could reasonably be considered inappropriate in a professional setting

Our Responsibilities

Project maintainers are responsible for clarifying the standards of acceptable behavior and are expected to take appropriate and fair corrective action in response to any instances of unacceptable behavior.

Project maintainers have the right and responsibility to remove, edit, or reject comments, commits, code, wiki edits, issues, and other contributions that are not aligned to this Code of Conduct, or to ban temporarily or permanently any contributor for other behaviors that they deem inappropriate, threatening, offensive, or harmful.

Scope

This Code of Conduct applies within all project spaces, and it also applies when an individual is representing the project or its community in public spaces. Examples of representing a project or community include using an official project e-mail address, posting via an official social media account, or acting as an appointed representative at an online or offline event. Representation of a project may be further defined and clarified by project maintainers.

Enforcement

Instances of abusive, harassing, or otherwise unacceptable behavior may be reported by contacting the project team at hello@fig.io. All complaints will be reviewed and investigated and will result in a response that is deemed necessary and appropriate to the circumstances. The project team is obligated to maintain confidentiality with regard to the reporter of an incident. Further details of specific enforcement policies may be posted separately.

Project maintainers who do not follow or enforce the Code of Conduct in good faith may face temporary or permanent repercussions as determined by other members of the project's leadership.

Attribution

This Code of Conduct is adapted from the [Contributor Covenant](<https://www.contributor-covenant.org/>), version 1.4, available at <https://www.contributor-covenant.org/version/1/4/code-of-conduct.html>

For answers to common questions about this code of conduct, see <https://www.contributor-covenant.org/faq>

Catch-The-Egg

A simple Catch the egg game by Lalit

Repository: chakra-ui

File: README.md

Changesets

Hello and welcome! This folder has been automatically generated by `@changesets/cli`, a build tool that works with multi-package repos, or single-package repos to help you version and publish your code. You can find the full documentation for it [in our repository](https://github.com/changesets/changesets)

We have a quick list of common questions to get you started engaging with this project in [our documentation](https://github.com/changesets/changesets/blob/master/docs/common-questions.md)

File: big-cherries-wash.md

"@chakra-ui/styled-system": patch

Fixed an issue where TypeScript did not allow custom breakpoint names in `ResponsiveObject`

File: hungry-coins-hang.md

"@chakra-ui/color-mode": minor

You can now customize the `nonce` of the `<script>` that `ColorModeScript` creates by passing `nonce` prop.

File: red-mayflies-reflect.md

"@chakra-ui/cli": patch

CLI tokens command now ignores TS errors in your `theme.ts` file

name: Report a bug ?
about: Something isn't working as expected? Here is the right place to report.

<!--
Thanks for creating an issue ?!

Please search open/closed issues before submitting. Someone
might have asked the same thing before ?!
-->

? Bug report

> Provide a brief description of the bug here

? Steps to reproduce

> Clear and concise reproduction steps are important for us to be able to triage
> your issue in a timely manner

1. Go to '...'
2. Click on '....'
3. Scroll down to '....'
4. See error

? Link to reproduction

> Please create a minimal reproduction in CodeSandbox

>

> - JavaScript Template:

> [JavaScript CodeSandbox
template](https://codesandbox.io/s/github/chakra-ui/codesandbox-react-js-template/tree/master)

>

> - TypeScript Template:

> [TypeScript CodeSandbox
template](https://codesandbox.io/s/github/chakra-ui/codesandbox-react-ts-template/tree/master)

? Expected behavior

> Tell us what you expect to happen.

? Possible Solution

> Not compulsory, but suggesting a fix would be great!

? System information

| | | |
|----------|------------|--|
| Software | Version(s) | |
| ----- | ----- | |

| | | |
|------------------|--|--|
| Chakra UI | | |
| Browser | | |
| Operating System | | |

? Additional information

- Screenshots or code
- Notes or link to ideas

File: feature_request.md

name: Request a feature or enhancement ?

about: Want a feature to be added to Chakra UI?

<!--

Thanks for filing an issue ?!

Please search open/closed issues before submitting. Someone might have asked the same thing before ?!

-->

? Feature request

> Please describe your request in one or two sentences.

? Problem Statement / Justification

> Please provide valid reason(s) why this should added to Chakra UI.

>

> If this feaure is related to a problem you've noticed. Mention it as well

? Proposed solution or API

> Please provide code snippets, gists, or links to the ideal design or API

?? Alternatives

> What alternative solutions have you considered before making this request?

? Additional Information

> What resources (links, screenshots, etc.) do you have to assist this effort?

File: pull_request_template.md

<!--

Thanks for creating an Pull Request ?!

Please read the following before submitting:

- PRs that adds new external dependencies might take a while to review.
 - Keep your PR as small as possible.
 - Limit your PR to one type (docs, feature, refactoring, ci, or bugfix)
- >

Closes # <!-- Github issue # here -->

? Description

> Add a brief description

?? Current behavior (updates)

> Please describe the current behavior that you are modifying

? New behavior

> Please describe the behavior or changes this PR adds

? Is this a breaking change (Yes/No):

<!-- If Yes, please describe the impact and migration path for existing Chakra users.
-->

? Additional Information

Chivel

Live ? <https://chivel.tk>

****Eg.****

- <https://codedamn.chivel.tk>
- <https://fireship.chivel.tk>
- <https://vercel.chivel.tk>

[Chivel](<https://chivel.tk/>) helps you ****generate a website for your Youtube channel**** in matter of seconds.

Just let Chivel know your Youtube channel and choose a custom subdomain such as ***fireship*.chivel.tk** or ***freecodecamp*.chivel.tk** and a super fast and SEO friendly website gets generated in the blink of a eye just for you.

Once a website is created, you get many options to customize it such as editing the Navbar, Analytics, adding announcement panels, etc..

Tech Used

- Supabase DB - Database
- Supabase Auth - Authentication
- Supabase Storage - Og image hosting
- Vercel - hosting
- Next.js - React framework for building frontend

Team

Copii

Copy button for GitHub Readme files ? ? ? Ready to use

Every example below is fully functional, you can test it by clicking the buttons.

```
[![]](https://data.jsdelivr.com/v1/package/gh/lalit2005/copii/badge)](https://www.jsdelivr.com/package/gh/lalit2005/copii)
```

Table of Contents

- [Features](#features)
- [Demo (GIF)](#demo-)
- [How to use Copii (Step by step guide)](#how-to-use-copii-)
- Examples
- [Default `Copy` button](#default-copy-button)
- [`Copy below code` button](#copy-below-code-button)
- [`Copy above code` button](#copy-above-code-button)

Features

1. Dark mode for redirecting page
2. Support for custom logo in redirecting page
3. Can be used to copy upto 1,500 characters (can vary depending upon the length of URL of custom logo).
4. And many more coming

Demo ?

[Demo](https://bit.ly/2YSQxjl)

How to use Copii ?

<details>

<summary>How to use Copii's</summary>

- Head over to [Copii homepage](https://copii.vercel.app)

- Scroll down to the form

![[image.png]](https://cdn.hashnode.com/res/hashnode/image/upload/v1612847025789/7z-4rHnFB.png)

- Check the check box if you want Dark Mode in redirecting page (optional)

![[image.png]](https://cdn.hashnode.com/res/hashnode/image/upload/v1612773586539/1S9JyL-ua.png)

- Enter the text/code you want to be copied when the user clicks on `Copy` button in README file

![[image.png]](https://cdn.hashnode.com/res/hashnode/image/upload/v1612847152376/CfsFm9dEJ.png)

- Enter the URL (optional) for custom logo in redirecting page

![[image.png]](https://cdn.hashnode.com/res/hashnode/image/upload/v1612847412557/Xit599Pom.png)

- Click on `Generate`

![[image.png]](https://cdn.hashnode.com/res/hashnode/image/upload/v1612847520906/9dS9czuEu.png)

- Now you will be able to see 3 buttons that you can use

![[image.png]](https://cdn.hashnode.com/res/hashnode/image/upload/v1612847631173/w7IbIujvL.png)

- Click on any of the button to copy its markdown code. When a user clicks on any of button in README or any other rendered markdown file, user will be taken to `https://copii.vercel.app/?ct=hi` (for example) and the text/code gets copied to clipboard there. Now, the user will be redirected back to same part webpage/github readme back with the help of `History API`

- Paste the markdown code in your markdown file/readme file and you are good to go ?

</details>

Default `Copy` button

Click on `Copy` button to see Copii in action

After clicking it, you will find `Hello Copii !!` in your clipboard

```
[![copy](https://cdn.jsdelivr.net/gh/lalit2005/copii@master/assets/copy.svg)](https://copii.vercel.app/?ct=Hello%20Copii%20!!&tm=blk&lg=https://avatars.githubusercontent.com/u/69138026?s=60&v=4)
```

`Copy below code` button

```
[![copy](https://cdn.jsdelivr.net/gh/lalit2005/copii@master/assets/copy-below-code.svg)](

</nav>
<div id="main-doc">
<!-- ----- SECTION ----- -->
<section class="main-section">
<header id="introduction">
<h1>Introduction</h1>
</header>
</section>
<p>
This tutorial will have you deploying a Node.js app to Heroku in minutes.

Hang on for a few more minutes to learn how to get the most out of the Heroku platform.

The tutorial assumes that you have a free Heroku account, and that you have Node.js and
npm installed
locally.
</p>
<!-- ----- SECTION ----- -->
```

```
<section class="main-section">
```

```
<header id="set_up">
```

```
<h1>Set up</h1>
```

```
</header>
```

```
<p>
```

In this step you'll install the Heroku Command Line Interface (CLI). You use the CLI to manage and scale

your applications, provision add-ons, view your application logs, and run your application locally.

Use the heroku login command to log in to the Heroku CLI:

This command opens your web browser to the Heroku login page. If your browser is already logged in to

Heroku, simply click the Log in button displayed on the page.

Use the heroku login command to log in to the Heroku CLI:

```
<div class="code">
```

```
$ heroku login<br>
```

```
$ heroku: Press any key to open up the browser to login or q to exit<br>
```

```
? Warning: If browser does not open, visit<br>
```

```
? https://cli-auth.heroku.com/auth/browser/***<br>
```

```
heroku: Waiting for login...<br>
```

```
Logging in... done<br>
```

```
Logged in as me@example.com<br>
```

```
</div>
```

This authentication is required for both the heroku and git commands to work correctly.

Before you continue, check that you have the prerequisites installed properly. Type each command below

and make sure it displays the version you have installed. (Your versions might be different from the

example.) If no version is returned, go back to the introduction of this tutorial and install the

prerequisites.

All of the following local setup will be required to complete the ?Declare app dependencies? and

subsequent steps.

This tutorial will work for any version of Node greater than 8 - check that it's there:

```
</p>
```

```
</section>
```

```
<!-- ----- SECTION ----- -->
```

```
<section class="main-section">
```

```
<header id="prepare_the_app">
```

```
<h1>Prepare the app</h1>
```

```
</header>
```

```
<p>
```

In this step, you will prepare a sample application that's ready to be deployed to Heroku.

To clone a local version of the sample application that you can then deploy to Heroku, execute the

following commands in your local command shell or terminal:

```
<div class="code">$ git clone https://github.com/heroku/node-js-getting-started.git  
<br>  
$ cd node-js-getting-started  
</div>
```

Before you continue, check that you have the prerequisites installed properly. Type each command below

and make sure it displays the version you have installed. (Your versions might be different from the example.) If no version is returned, go back to the introduction of this tutorial and install the prerequisites.

All of the following local setup will be required to complete the ?Declare app dependencies? and subsequent steps.

This tutorial will work for any version of Node greater than 8 - check that it?s there:

```
<div class="code">  
$ node --version <br>  
v12.16.3  
</div>
```

npm is installed with Node, so check that it?s there. If you don?t have it, install a more recent version of Node:

```
<div class="code">  
$ node --version <br>  
v12.16.3  
</div>
```

Now check that you have git installed. If not, install it and test again.

```
<div class="code">  
$ git --version <br>  
git version 2.17.0  
</div>  
</p>  
</section>  
<!-- ----- SECTION ----- -->  
<section class="main-section">  
<header id="deploy_the_app">  
<h1>Deploy the app</h1>  
</header>  
<p>
```

In this step you will deploy the app to Heroku.

Create an app on Heroku, which prepares Heroku to receive your source code.

```
<div class="code">  
$ heroku create <br>  
Creating sharp-rain-871... done, stack is heroku-18 <br>
```

```
http://sharp-rain-871.herokuapp.com/ | https://git.heroku.com/sharp-rain-871.git <br>
Git remote heroku added <br>
</div>
```

When you create an app, a git remote (called heroku) is also created and associated with your local git repository.

Heroku generates a random name (in this case sharp-rain-871) for your app, or you can pass a parameter to specify your own app name.

Now deploy your code:

```
<div class="code">
$ git push heroku main <br>
Counting objects: 488, done. <br>
Delta compression using up to 8 threads. <br>
Compressing objects: 100% (367/367), done. <br>
Writing objects: 100% (488/488), 231.85 KiB | 115.92 MiB/s, done. <br>
Total 488 (delta 86), reused 488 (delta 86) <br>
remote: Compressing source files... done. <br>
remote: Building source: <br>
remote: <br>
remote: -----> Node.js app detected <br>
remote: <br>
remote: -----> Creating runtime environment <br>
remote: <br>
remote: NPM_CONFIG_LOGLEVEL=error <br>
remote: NODE_VERBOSE=false <br>
remote: NODE_ENV=production <br>
remote: NODE_MODULES_CACHE=true <br>
remote: <br>
remote: -----> Installing binaries <br>
remote: engines.node (package.json): 12.x <br>
remote: engines.npm (package.json): unspecified (use default) <br>
remote: <br>
remote: Resolving node version 12.x...
remote: Downloading and installing node 12.16.3... <br>
remote: Using default npm version: 6.14.4 <br>
.... <br>
remote: -----> Build succeeded! <br>
remote: -----> Discovering process types <br>
remote: Procfile declares types -> web <br>
remote: <br>
remote: -----> Compressing... <br>
remote: Done: 19M <br>
remote: -----> Launching... <br>
remote: Released v3 <br>
remote: http://sharp-rain-871.herokuapp.com deployed to Heroku <br>
remote: <br>
remote: Verifying deploy... done. <br>
To https://git.heroku.com/nameless-savannah-4829.git <br>
* [new branch] main -> main <br>
```

</div>

The application is now deployed. Ensure that at least one instance of the app is running:

```
<div class="code">
$ heroku ps:scale web=1
</div>
```

Now visit the app at the URL generated by its app name. As a handy shortcut, you can open the website as follows:

```
<div class="code">
$ heroku open
</div>
</p>
</section>
<!-- ----- SECTION ----- -->
<section class="main-section">
<header id="view_logs">
<h1>View logs</h1>
</header>
<p>
Heroku treats logs as streams of time-ordered events aggregated from the output streams
of all your app
and Heroku components, providing a single channel for all of the events.
```

View information about your running app using one of the logging commands, `heroku logs --tail`:

```
<div class="code">
$ heroku logs --tail
2011-03-10T10:22:30-08:00 heroku[web.1]: State changed from created to starting <br>
2011-03-10T10:22:32-08:00 heroku[web.1]: Running process with command: `node index.js`
<br>
2011-03-10T10:22:33-08:00 heroku[web.1]: Listening on 18320 <br>
2011-03-10T10:22:34-08:00 heroku[web.1]: State changed from starting to up <br>
</div>
```

Visit your application in the browser again, and you'll see another log message generated.

Press Control+C to stop streaming the logs.

```
</p>
</section>
<!-- ----- SECTION ----- -->
<section class="main-section">
<header id="next_steps">
<h1>Next steps</h1>
<p>
You now know how to deploy an app, change its configuration, view logs, scale, and
attach add-ons.
```

Here's some recommended reading. The first, an article, will give you a firmer

understanding of the
basics. The second is a pointer to the main Node.js category here on Dev Center:

Read [How Heroku Works](#) for a technical overview of the concepts you'll encounter while writing, configuring, deploying and running applications.
Visit the [Node.js category](#) to learn more about developing and deploying Node.js applications.
Read [Deploying Node.js Apps on Heroku](#) to understand how to take an existing Node.js app and deploy it to Heroku.

```

Hashnode Docs rebuilt with Hyperdocs

Here's [Hashnode support docs](https://support.hashnode.com) repo made with Hyperdocs

![[image.png](https://cdn.hashnode.com/res/hashnode/image/upload/v1646119393849/EDA0uU6aD.png)]

The `package.json` only contains a single dev dependency

```
```json
{
 "devDependencies": {
 "hyperdocs-cli": "^0.0.5"
 }
}
```

And here's the same docs built with Docusaurus

![[image.png](https://cdn.hashnode.com/res/hashnode/image/upload/v1646119437431/WfPA1CI9m.png)]

> In both of the images, docs/ folder contain same files. In the first one(with Hyperdocs), there's no frontmatter in every page!

Hyperdocs vs other documentation tools

---

If you have just created a blog with Hashnode, here are some important tips for you. These tips are applicable for everyone, irrespective of which URL you chose for your Hashnode Blog, custom domain or hashnode.dev subdomain.

## Tell Google about your new blogging destination

Before you think about ranking on a certain keyword and getting link backs from high traffic fetching websites, you need to inform Google that your domain exists.

One of the simplest and easiest ways to inform Google about your blog is by submitting your website on Google's Search Console. If you are a frequent blogger, chances are you are aware of how it works.

Here are the steps to submit your blog to Google's Search Console:

1. Log in with your Google account on [Google's Search Console](https://search.google.com/search-console/about).

2. Click on "Add Property"

![Google Search Console Screenshot](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960215295/o4dwV15JW.png?auto=compress)

3. Enter the name of the domain under the "URL prefix" property type section and click on "Continue."

![Verify the Domain on Google Search Console](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960261890/Jk-cmVc\_M.png?auto=compress)

4. Expand the "HTML tag" tab.

![Verify the domain through HTML tag](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960299064/SomRhoGsb.png?auto=compress)

5. Copy the HTML tag.

![HTML meta tag from Google Search Console](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960330674/ZQdhu4F2K.png?auto=compress)

6. Go to your Blog's dashboard.

![Townhall by Hashnode Screenshot](https://cdn.hashnode.com/res/hashnode/image/upload/v1615357422616/\_tli8gbNz.png?auto=compress)

7. Navigate to the "Integration" tab and paste the HTML Tag inside the "Meta tags" field. Click on the "Update" button. This will clear the cache of your blog's homepage and insert the HTML tag provided by Google inside the `` tag of your blog.

![Hashnode's Blog Dashboard](https://cdn.hashnode.com/res/hashnode/image/upload/v1615357496477/H6BxAclBa.png?auto=compress)

8. Go back to Google Search Console and click on the "Verify" button. If you have followed the above steps correctly, Google should be able to find the meta tag and verify the domain.

![Google Search Console's Verification Successful Screen](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960410631/S6rj7rggD\_.png?auto=compress)

9. Now comes the part where we tell Google about the links present on your blog. Go to the Sitemap section present on the sidebar on Google Search Console.

![Sitemap on Google Search Console]

Console](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960433879/7d4WUvilp.png?auto=compress)

10. Every blog on Hashnode has a sitemap, and it's available at `/sitemap.xml`. For example [townhall.hashnode.com/sitemap.xml](https://townhall.hashnode.com/sitemap.xml). On the Google Search Console, enter `sitemap.xml` in the input field. \*Don't prepend the slash `/`. Google has already added that for you.\*

![Sitemap on Google Search Console](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960460447/Fh\_5AgxFT.png?auto=compress)

11. On successful submission, you should see the following screen.

![Sitemap submission successful](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960489075/XLQ--3Qaf.png?auto=compress)That's it! Google is now aware of your blog. It'll crawl your sitemap periodically and index your blog posts, even the future ones automatically.

## Enable AMP on your Hashnode blog

There's no denying that Google prefers AMP pages than normal web pages on mobile searches. Hence, you can improve your Hashnode Blog's ranking on mobile searches by enabling AMP on your blog. Follow these steps:

1. Go to your Blog's dashboard

![Townhall by Hashnode Screenshot](https://cdn.hashnode.com/res/hashnode/image/upload/v1615357422616/\_tli8gbNz.png?auto=compress)

2. Navigate to the "SEO" tab

![SEO Tab](https://cdn.hashnode.com/res/hashnode/image/upload/v1615357465328/qgcoG0SVu.png?auto=compress)

3. Scroll down and check the option "Enable AMP."

![Enable AMP on Hashnode](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960590203/sz4\_sraRp.png?auto=compress)

Google will take up to a day to validate AMP pages on your blog and replace your normal links with AMP pages for mobile searches automatically. Here's a snapshot of how my blog result looks like on Google search.

![AMP search result on Google](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960615121/mOoOMhxs1.png?auto=compress)

## Link trail from your social media accounts

Linking your blog from your social media accounts is another great way to tell Google

about your blog.

On Twitter, you can add a link in your bio and also inside the "Website" field. Refer to the screenshot below.

![Catalin Pit's Profile on Twitter](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960637455/6Xz-3IX\_Q.png?auto=compress)

On LinkedIn, you can add your blog to the featured section:

![LinkedIn](https://cdn.hashnode.com/res/hashnode/image/upload/v1597960658284/qhHSP17nY.png?auto=compress)

Similarly, you can link your blog from the bio section of Instagram and Facebook pages as well.

File: analytics.md

---

Hashnode's analytics feature allows you to monitor your blog's performance via a visual representation alongside statistics for your articles.

You can also have a glimpse of your blog's performance right in Hashnode's Feed at the bottom-right corner of the page.

It displays the count of page views per day/week, the total number of posts you write in a week, and the number of likes or appreciations your posts received from the community.

![Hashnode Analytics](https://cdn.hashnode.com/res/hashnode/image/upload/v1610542364234/LJwkZrj7p.png?auto=compress)

---

Here is how to check your blog's analytics:

1. Log in to your Hashnode account.
2. Click on your **profile picture** at the bottom-left corner of the page on `_desktop_` screen or top-right corner on `_mobile_` screen.

![Hashnode's Feed](https://cdn.hashnode.com/res/hashnode/image/upload/v1616492775188/7u9FsH\_We.png?auto=compress)

3. Click on the **Blog Dashboard** option from the popup modal to access your blog's dashboard.

![Hashnode's Feed](https://cdn.hashnode.com/res/hashnode/image/upload/v1616495148429/anxb08ZqM.png?auto=compress)

4. Click on the **ANALYTICS** tab to view your blog's performance in a graphical

representation (Views per day, 7 days, 30 days, and All time) and a tabular representation (Blog Post, Views, Comments, and Reactions).

![Hashnode Analytics](https://cdn.hashnode.com/res/hashnode/image/upload/v1616497315320/mNjE3UPMW.png?auto=compress)

![Hashnode Analytics](https://cdn.hashnode.com/res/hashnode/image/upload/v1601383085554/neRc81EVW.png?auto=compress)

File: audio-blogs.md

---

We all love to read, but as developers, we are always busy! So, it's often difficult to find time to read - That's why we added the **Audio Blogs** feature on Hashnode blogs. ?

This feature automatically converts articles on a Hashnode blog into an audio version to enable developers to listen to their favorite articles while working on their day-to-day tasks (e.g., going for a run, cooking, etc.).

By doing this, developers can save more time every day and dedicate that to something else.

---

## ## How to get access to the Audio Blogs feature

The **Audio Blogs** feature is for only [Hashnode Ambassadors](https://hashnode.com/ambassador) because we want to first understand the usage and cost before rolling it out to everyone. This will also allow us to improve and optimize the offering before general availability.

If you need access to it now, consider becoming an [ambassador](https://hashnode.com/ambassador) by inviting a friend to use Hashnode. ?

---

## ## How to enable the Audio Blogs feature

The Audio Blogs feature is not enabled by default on Hashnode. Follow the steps below to enable it on your blog:

1. Go to your blog's dashboard and click on the **Advanced** tab.

![Advanced tab](https://cdn.hashnode.com/res/hashnode/image/upload/v1623877139776/MlTq9DHPw.png)

2. On the **Advanced settings page**, click on the **toggle button** in the **Audio Blogs** section to enable the feature on your blog.

![Enable Audio Blogs on Hashnode](https://cdn.hashnode.com/res/hashnode/image/upload/v1623877729967/gbQRBk61m.png)

We will start converting all your existing articles into audio format and show an audio

player (see image below) on the articles. All your future articles will also be converted to audio automatically.

![[Audio Blogs on Hashnode](https://cdn.hashnode.com/res/hashnode/image/upload/v1623878272056/JCb-VVtkE.png)]

File: auto-github-backups.md

---

You can automatically backup your published posts as markdown files to a public or private repository on GitHub. Backups are also updated automatically upon any edit or delete change.

---

Here is how to set up automatic GitHub backups on your blog:

1. Create a [new repository](https://github.new/) on GitHub to store your articles, probably named **hashnode-backups** or **articles**.
2. Log in to your Hashnode account.
3. Click on your **profile picture** at the bottom-left corner of the page on `_desktop_` screen or top-right corner on `_mobile_` screen.

![[Hashnode's Feed](https://cdn.hashnode.com/res/hashnode/image/upload/v1616492775188/7u9FsH\_We.png?auto=compress)]

4. Click on the **Blog Dashboard** option from the popup modal to access your blog's dashboard.

![[Hashnode's Feed](https://cdn.hashnode.com/res/hashnode/image/upload/v1616495148429/anxb08ZqM.png?auto=compress)]

5. Navigate to **BACKUP** and click the **Hashnode GitHub App** link provided to install the Hashnode GitHub App in the repository you created.

![[Backup](https://cdn.hashnode.com/res/hashnode/image/upload/v1616498249834/hf1tk9VQ0.png?auto=compress)]

6. Select "one repository" (the repository you created) and click on **Save**.

![[Hashnode's Feed](https://cdn.hashnode.com/res/hashnode/image/upload/v1611067017327/gNs4WB9xS.png?auto=compress)]

6. Upon successful installation, we will automatically backup your published articles to the created repository and update them upon any change.

Please help us build a better community for you. Submit a new feature suggestion or bug.

---

Here is how to submit a feature request or report a bug on Hashnode.

1. Go to Hashnode's [Feature Requests](https://hashnode.com/feature-requests) page.

![[Hashnode  
Page](https://cdn.hashnode.com/res/hashnode/image/upload/v1614933787374/bAl4gGVGi.png?auto=compress) Feature Request

2. Click on the **New Request** button at the center of the page to add the feature request or bug report.

![[Hashnode  
Page](https://cdn.hashnode.com/res/hashnode/image/upload/v1614935003492/HwilwZ8UA.png?auto=compress) Feature Request

3. Add a title and description of the feature request or bug you intend to report.

![[Hashnode  
Page](https://cdn.hashnode.com/res/hashnode/image/upload/v1614935809283/qWxsCEZXn7.png?auto=compress) Feature Request

4. After completing the title and description fields, click on the **Settings** option.

![[Hashnode  
Page](https://cdn.hashnode.com/res/hashnode/image/upload/v1614935904799/CX840Egjo.png?auto=compress) Feature Request

5. Use the radio button options to select if you want to submit a **Feature Request** or make a **Bug Report**.

![[Hashnode  
Page](https://cdn.hashnode.com/res/hashnode/image/upload/v1614936088687/-bNotMr1s.png?auto=compress) Feature Request

6. Click on the **Submit** button to complete the process.

![[Hashnode  
Page](https://cdn.hashnode.com/res/hashnode/image/upload/v1614936438717/WU0bxBkNe.png?auto=compress) Feature Request

---

You can track the progress of submitted requests by using the toolbar to navigate through **Top**, **New**, **In progress**, **Closed** and **Archived** requests.

The **In progress** label signifies which feature request or bug report is currently a work in progress task by the Hashnode team.

! [Feature Request  
Toolbar] ([https://cdn.hashnode.com/res/hashnode/image/upload/v1614936732862/HDI-b\\_Sm1.png?auto=compress](https://cdn.hashnode.com/res/hashnode/image/upload/v1614936732862/HDI-b_Sm1.png?auto=compress))

# Hashnode Reactor

Hashnode reactor helps you react to your favorite hashnode articles in a fraction of a second.

See my article, to use it and to know how I build this.

[Click

here]('https://cb-ashik.hashnode.dev/how-i-built-hashnode-reactor-react-to-hashnode-articles-in-a-snap')

<https://cb-ashik.hashnode.dev/how-i-built-hashnode-reactor-react-to-hashnode-articles-in-a-snap>

File: content\_script.js

---

```
function react() {
 const buttons = [
 'Claps claps',
 'Love it',
 'Cheers!',
 'I am loving it!',
 `It's party time`,
 `Here's my like`,
 `You're a unicorn`,
 'You deserve a trophy!',
 'Take my money',
 'Fly high',
];

 const toggleBtn = document.querySelector(
 '[aria-label="Toggle reaction modal"]'
);

 if (!toggleBtn) {
 buttons.forEach((button) =>
 document.querySelector(`[aria-label="${button}"]`).click()
);
 } else {
 toggleBtn.click();
 buttons.forEach((button) =>
 document.querySelector(`[data-reaction-name="${button}"]`).click()
);
 }
}

react();
```

# Repository: hyperdocs

## File: README.md

---

![[image](https://user-images.githubusercontent.com/69138026/156125650-a2f7cd40-0a20-439d-bf1f-70c4c1da9227.png)]

Hyperdocs is the simplest way you can create documentation for your project. It blends the best of all the other documentation tools in one.

**Hyperdocs** requires no configuration and yet is highly customizable. You just need to have a bunch of markdown files in a /docs directory and Hyperdocs will take care of the rest.

View demo [here](https://hyperdocs.netlify.app/hashnode/docs)

[Here's How I built Hyperdocs](https://lalit2005.hashnode.dev/hyperdocs)

### ## Some handy links

- Hyperdocs website - <https://hyperdocs.netlify.app/>
- GitHub Repo - <https://github.com/lalit2005/hyperdocs>
- Hyperdocs Documentation - <https://hyperdocs.netlify.app/hyperdocs/docs>
- Hyperdocs vs Docusaurus - <https://hyperdocs.netlify.app/hyperdocs/docs/vs-docusaurus>

### ## Features

- ? **No configuration** required.
- ? **No rebuilds** or dealing with hosting providers needed.
- ? Built in **blog** for your project.
- ? **Premade components** for your docs such as callouts, tooltips, react live code preview, etc. all inside markdown.
- ? Built in **feedback collection widget**.
- ? Ability to add **custom domains**/subdomains for your site.
- ? Super fast documentation and blogs hosted on edge on **Netlify**.
- ? Use different themes and plugins to enhance the look and feel of your documentation.
- ? A beautiful homepage that can be customized.
- ? Auto updating docs site that fetches content from GitHub repo periodically.
- ? Dark mode for all pages.
- ? Ability to use jsx inside markdown.
- ? Dashboard to manage your docs site.
- ? Support for private repositories.

### ## Comparison

![[image](https://user-images.githubusercontent.com/69138026/164963852-ec3f5885-d4c6-42c2-b38c-ee76f1ffff28.png)]

File: constants.ts

---

```
export const SidebarFileContent = `introduction.md
getting-started.md
`;
```

```
export const IndexFileContent = `# Welcome to Hyperdocs!
```

This page will be rendered at the root of the documentation at /docs/

Visit <https://hyperdocs.netlify.app/docs> for more info.  
`;

```
export const IntroductionFileContent = `Introduce your project here.
```

You can use jsx inside this markdown file and also use many prebuilt components.

Visit <https://hyperdocs.netlify.app/docs> for more info.  
`;

```
export const GettingStartedFileContent = `You can write your project's getting started
guide here.
```

You can delete this file and remove it from `\_sidebar.txt` if you would like to not have this page`

To create a new page, just run `\`hyperdocs-cli new <filename>\``;

```
export const NextStepsMessage = `Next steps:
```

1. Run `\`hyperdocs-cli new <filename>\`` to create a new page
  2. Push it to GitHub.
  3. Make sure you setup a docs site in Hyperdocs dashboard.
  4. You can customize the navbar, themes, etc. in the dashboard.
  5. If everything is fine, the documentation site will update automatically in a few mins.
- ```
`;
```

Repository: iwantoxygen

File: README.md

This is a [Next.js](https://nextjs.org/) project bootstrapped with [`create-next-app`](https://github.com/vercel/next.js/tree/canary/packages/create-next-app).

Getting Started

First, run the development server:

```
``bash
npm run dev
# or
yarn dev
``
```

Open http://localhost:3000 with your browser to see the result.

You can start editing the page by modifying `pages/index.js`. The page auto-updates as you edit the file.

[API routes](https://nextjs.org/docs/api-routes/introduction) can be accessed on http://localhost:3000/api/hello. This endpoint can be edited in `pages/api/hello.js`.

The `pages/api` directory is mapped to `/api/*`. Files in this directory are treated as [API routes](https://nextjs.org/docs/api-routes/introduction) instead of React pages.

Learn More

To learn more about Next.js, take a look at the following resources:

- [Next.js Documentation](https://nextjs.org/docs) - learn about Next.js features and API.
- [Learn Next.js](https://nextjs.org/learn) - an interactive Next.js tutorial.

You can check out [the Next.js GitHub repository](https://github.com/vercel/next.js/) - your feedback and contributions are welcome!

Deploy on Vercel

The easiest way to deploy your Next.js app is to use the [Vercel Platform](https://vercel.com/new?utm_medium=default-template&filter=next.js&utm_source=create-next-app&utm_campaign=create-next-app-readme) from the creators of Next.js.

Check out our [Next.js deployment documentation](https://nextjs.org/docs/deployment) for more details.
